

CAPABILITY STATEMENT

Secure Salesforce delivery for the defense industrial base

We design, build and sustain Salesforce in Government Cloud for defense contractors and their suppliers, starting from the compliance regime and the delivery calendar.

Rocket Laboratory, LLC · CAGE 170Z9 · UEI YXTMCQV1SLF8 · October 2026

WHAT WE DO

Core competencies

Salesforce Government Cloud delivery

Org design, data model, automation and integrations built for FedRAMP High, CMMC and DoD program requirements: capture-to-award pipelines, CPQ and contract vehicles, Sales, Service and Experience Cloud.

ISV and custom development

Apex, LWC and SOQL optimization, managed package architecture, integration and data management, and AppExchange security review preparation.

CMMC Level 2 readiness

Readiness assessments, evidence workbooks and Salesforce shared-responsibility mapping against NIST SP 800-171.

Managed services

A named senior resource for release and sandbox management, security and sharing reviews, and administrator enablement after go-live.

WHY US

Differentiators

- Principal holds an active **DoD Secret clearance**.
- **21+ years in GOVCON**. We start from the compliance regime, then configure.
- **Cyber-AB Registered Practitioner Organization** with an RP Advanced principal. We advise on readiness and never assess the clients we advise.
- **US-based personnel only**. No offshore development or subcontracted handoff.
- Least-privilege access, documented and revoked at close-out. CUI stays inside the boundary, never in sandboxes, laptops, tickets or AI tools.
- **You own the build**: metadata in your repository, decisions written down, and a handover package another partner could pick up.
